OHAUS

Class II Legal-for-Trade Portable Balances Ideal for Jewelry Weighing

Designed for a wide range of regular and trading applications, the Class ll certified SJX Carat and Gold balances are ideal for weighing jewelry, precious metals, gemstones etc. Equipped with superior overload protection, large backlit display, fast stabilization time, multiple weighing units, application modes and connectivity options, these slim balances offer a truly user-friendly weighing experience.

Standard Features:

- Multiple connectivity options are available for easy data logging and communication. An optional auxiliary display can also be installed for retail applications.

- Manual internal calibration allows easy calibration as Class II Legal-for-Trade, ensuring precision of the balance.

- Advanced weighing technology ensures reliable, repeatable weighing results.

SCOUT® SJX *Jewelry Scale*

Large LCD Display

The large backlit LCD display of the slim Scout provides operators a clear view of their weighing results. An optional auxiliary display can also be installed easily to provide additional weight notifications to customers in retail environments.

Scout has multiple connectivity options for convenient data logging and communication, as well as connecting to an auxiliary display. Options include - RS232, USB Host, USB Device, Ethernet and Bluetooth®*. With the USB Host option, you can simply save and transfer data from the balance to a USB drive. The Bluetooth option allows you to wirelessly operate the balance via a mobile device or tablet for Android™**.

Class II Approved Models

Approved models meet or exceed Class II accuracy requirements, making the new Scout ideal for commercial applications where reliability and precision are essential.

The Ingenious "Pull & Push" feature makes it easy to calibrate the balance manually. Regular calibration can ensure the balance's weighing performance, even in commercial trading mode. The balance is equipped with internal integral stainless steel weight which means that users don't need to worry about misplacing or finding extra space to store external masses.

Better Performance

Stabilization time as fast as one second and high resolution load cell with up to 150,000d resolution and readability to 0.001g, deliver extremely quick, precise and repeatable weighing results.

Superior Overload Protection

The superior mechanical overload protection system of the Scout is comprised of a high-strength stainless steel pan and an impact-resistant plastic pan support. This enables the balance to safely withstand loads up to ten times its rated capacity.

Draftshield Model Available

Scout's ingenious draftshield (1mg model only) was designed with an easy to remove top cover piece. This serves as a wind protection ring which keeps the weighing surface stable in rough environments, while maintaining weighing speed.
Built-in Application Modes

- **Weighing**—Determines the weight of items on the pan in the selected unit of measure.
- **Parts Counting**—Counts the number of pieces on the pan using a uniform weight.
- **Percent Weighing**—Measures the weight of a sample displayed as a percentage of a pre-established reference weight.
- **Checkweighing**—Compares the weight of a sample against target limits.

- **Totalization**—Measures cumulative weight of multiple items. Cumulative total may exceed the balance's capacity.
- **Density Determination**—Determines density of solids or liquid. With the integrated weigh below hook, it is possible to perform specific gravity tests for objects that cannot be easily placed on the weighing pan.
- **Display Hold**—Manually holds the last stable weight or the first highest stable weighing value on the display.

Draftshield
Protects the sample from external influences, increasing the speed and repeatability of measurements

Calibration
Scout SJX models feature a calibration tab for easy manual internal calibration

Connectivity
Expanded connectivity options include RS232, USB Host, USB Device, Ethernet and Bluetooth®

Security Slot
Integrated security slot prevents theft

Large Backlit LCD Display
High contrast LCD Display shows weight and application data clearly, even in poor lighting conditions

Lockswitch
The Scout can be locked into a specific configuration using the lockswitch

Weigh Below Hook
A weigh below hook on the bottom of the Scout allows for density determination or specific gravity calculations
