

BS-3080 Parallel Light Zoom Stereo Microscope

BS-3080

Introduction

BS-3080 is a research level zoom stereo microscope with infinite parallel Galileo optical system. Based on Galileo optical system and Apochromatic objective, it can provide real and perfect microscopic images on details. The excellent ergonomics and user-friendly operating system can truly allow users to experience a simple and comfortable work. The Mirror in the base can be 360 ° rotatable to achieve the best observation results. BS-3080 can meet the research demands of life sciences, biomedicine, microelectronics, semiconductors, materials science and other fields of research needs.

Feature

1. Tilting viewing head for comfortable operation.

Tilting viewing head from 5 to 45 degrees, can be flexibly adjusted for different operators with different posture.

2. Large zoom ratio 12.5:1.

BS-3080 has large zoom ratio of 12.5:1, zoom range from 0.8X to 10X, with click stop for main magnifications, the images remain clear and smooth during zoom magnifying.

3. Apochromatic objective.

Apochromatic design has significantly improved the color reproduction of the objective. Correcting the axial chromatic aberration of red/green/blue/purple, and converge them on a focal plane, the objective is able to present the real color of the samples. 2X apochromatic objective is optional.

4. Aperture diaphragm adjustment.

Shift the aperture diaphragm lever in front of the microscope to adjust depth of field for high-quality image.

Application

BS-3080 has great value in a variety of applications such as life science and medical research, including dissection, IVF, biological experiment, chemical analysis and cell culture. It also can be used in Industrial areas for PCB, SMT

surface, electronics inspection, semiconductor chip inspection, metal and materials testing, precision parts testing. coin collecting, gemology and gemstone setting, engraving, repair and inspection of small parts.
